

# OUR HEADQUARTER

VINTAGE COFFEE HYDERABAD, INDIA

MICHAEL CHIN CHAIRMAN

It gives me immense pleasure to present Vintage coffee.

Vintage coffee has been set up based on years of understanding of the coffee market. We have ensured that the most modern technology available in the coffee industry has been used in setting up the plant which will be future ready without any compromises and staffed with well experienced people and assure our esteemed customers highest standards in product quality and customer service.

BALAKRISHNA TATI MANAGING DIRECTOR

Having spent 25 years in the Coffee Industry, learnt and understand consumer needs, especially retaining aroma and taste. Thus incorporated these elements in Vintage coffee, that has been set up with state of the art equipment such as Probat Roaster, automated extraction system and enhanced aroma recovery system to name a few which will ensure mass customization.

Our investment in QA and QC process coupled with customer care initiatives will ensure that all general issues related to customers are resolved satisfactorily. I am pleased to inform that the plant has been commissioned in a record time and we at Vintage will strive to set new benchmarks for Instant coffee manufacture and customer service standards.

Coffee is a beverage which is universally loved. The main varieties of coffee are Arabica and Robusta. Arabica gives aroma and flavor whereas Robusta gives color, body and strength to the cup. Generally, coffee is prepared in a conventional manner, basically the beans are roasted and ground, which is then used with a filter to prepare the brew for consumption.

However, in today's modern world where time is premium and convenience is preferred, Soluble or Instant coffee has become popular. Instant Coffee is nothing but a process where in roast and ground coffee is made soluble through a technological process.

Vintage coffee has perfected this technology of making Instant coffee by putting together a state of the art instant coffee plant with latest machinery available in the industry to deliver an aromatic cup with consistent quality and with an installed capacity to manufacture 7200MT of Spray and Agglomerated Instant Coffee per annum.

The green beans are processed and sorted through a sorter and then the blend constituents are separately roasted in the world famous PROBAT roaster which can customize roasting curves for each customer. There after the beans are ground and put into automated extraction system which can be again customized as per taste requirements, Once the extraction is done, to preserve aroma, our state of the art aroma recovery system separates the aroma . Once the extracted brew is evaporated to desired levels, the aroma is added back and released in small particles into the spray drying tower to collect spray dried powder.

The spray dried powder is micro ground and steamed in an agglomerator to prepare granules or agglomerated coffee.

#### OUR PRODUCTS

#### Spray Dried Instant Coffee

#### Agglomerated Instant Coffee.
